PROFILE

In the last years worked with Angular, Typescript, RxJS, NgRx and ESNEXT. Since 2014 working with AngularJS, jQuery, Javascript, Bootstrap, CSS, UX, besides working on experimental projects with NodeJS, ExpressJS, MongoDB, PWA, Firebase, Flutter, and other latest front-end technologies. Most recently, starting studying the "dark side of the moon", the backend also the patterns involved. This time with Java + Spring Framework, Microservices, Docker, and all stuff that is necessary to be a full-stack developer. Involved with SAAS startup environment and software technology in general (design, development, marketing, and financial). Focus on results and solutions to complex problems, I proactively dedicate myself, always looking for ways to solve any challenge that someone entrusts it.

EXPERIENCE

FRONT END DEVELOPER

Basecone | Remotely – Portugal | 2021 - Present

Giving more time to the accountant, I have been working on this huge platform, which is an important part of the integration process to control the authorization flow and assign invoices automatically to the right users.

The web portal has an automated workflow, where it is possible to upload a document (or send it by email, even scan by mobile application), that it recognized the data by OCR and provides the essential tools to the accountants to handle their routines in the fiscal process.

As a frontend developer, I have been working on new features using the redux pattern in Angular way with Storeon and I am responsible for ensuring the code coverage above 80%, writing the unit tests using that connected with the business rules, also implementing the End-to-End tests with the TestCafe library.

Technological environment: JIRA, Confluence, CI/CD, Rest API, SPIKE, Microservices, Scrum, Git, Docket, Visual Studio, SQL Server, NodeJS, npm, Angular, Angular CLI, Typescript, JavaScript, Jasmine, TestCafe, HTML, SASS, CSS, and GitHub.

FRONT END DEVELOPER

Agap2IT | Remotely – Portugal | 2021

Working in a service for collection, verification, and storage of data and documents. It is for financial and non-financial institutions subject to AML (Anti-Money Laundering)/KYC (Know Your Customer) professional obligations and also all-natural and legal persons by a centralized KYC repository.

Involved in all stages of a feature delivery: grooming sessions, check details from acceptance criteria and do the code development. Besides, I do code reviews and keep JIRA up to date. Sometimes it is necessary to deep dive into the code to avoid repeat me and apply the best approach for a project that's running for a couple of years.

Technological environment: JIRA, SonarQube, CI/CD, Rest API, SPIKE, Microservices, Scrum, Git, Spring Boot, IntelliJ IDEA, MongoDB, Angular, Angular CLI, Typescript, JavaScript, HTML, SASS, CSS, and Gitlab.

FRONT END DEVELOPER

Altran | Fundão – Portugal | 2020 – 2021

In the first project I worked on, it was a POC that is an extension of in-car entertainment and allows the driver to control climate comfort. In the most recent project, the main goal was the construction of a multi branding and multilingual frontend application to the customer, that runs in a desktop, mobile, and kiosks. The project consisted of a companion web app that enabled the customer to rent machines and the dealers to configure all stuff to the customer, such as booking, portal, and institutional content. At the last project I working on FIRE project for Proximus BE, the project had the main goal, to start a fiber campaign that sends sales agents door to door to buildings where Proximus can offer services on fiber connectivity.

My tasks were the development of the application using Angular 7 and participated at meetings, grooming, and planning with managers, client, designer, backend, and DevOps team, and also, I commitment to all SCRUM routines and ceremonies.

Technological environment: JIRA, SonarQube, Microsoft Azure, Rest API, MVVM, MVP, Kanban, Scrum, Git, Angular, Angular CLI, Typescript, JavaScript, HTML, SASS, CSS, indexedDB, Jasmine, Responsive Web Design, SCP, Simply and Gitlab.

FRONT END DEVELOPER

Radek Systems | Curitiba – Brazil | 2018 – 2020

At this company, I worked on a project named "Fidelidade" and the main goal of this PWA is to give cashback to the client. That project was created for MADERO, it is a huge network in Brazil and has something about 200 restaurants. We use Javascript and the most modern Chrome APIs: PWA, push notifications, offline approach, offline and online data synchronization (indexedDB), reactive programming (RxJS), creation, and communication of components through state management. Among so many other routines that involve client-side-development.

Technological environment: JIRA, SonarQube, Microsoft Azure, Rest API, MVVM, MVP, Kanban, Scrum, Git, Angular, Angular CLI, Typescript, Javascript, HTML, SASS, CSS, indexedDB, Jasmine, API Rest, Responsive Web Design, SCP, Simply and Gitlab.

FRONT END DEVELOPER

Pollysoft Software | Curitiba – Brazil | 2019

At this project, the goal was to migrate a software that was originally builder for desktop (VB net) to the web (Angular). On Pollysoft we work with Angular 6 and most with forms and value changes, when the user will create a new project, that shows up many tabs with many rows inside, and many forms with a lot of inputs that have a relation based on changes value.

As a frontend developer, and a I worked on a project that's the goal is to migrate a software was originally builder for desktop and at that time we worked to migrate that to the web, and that software was a builder for engineers to project an air condition system for huge builders (mainly malls).

Technological environment: MVC, Azure, Kanban, Monday, REST, Angular, Angular CLI, API Rest, Bootstrap, CSS, FTP FileZilla, Git, HTML, Javascript, npm, Typescript and Web API.

FRONT END DEVELOPER

Gatefy Security Solutions | Curitiba - Brazil | 2018

The main goal of this project was to handle inbox mail security. Create a component that is responsible for mark an email as a ham, spam, porn or another type.

I worked on an inbox feature, that's like a Gmail inbox, and on this project, we use a lit bit of redux in angular way, and the most complex thing on this component is that: the user can select more than one email and mark determined type, but if one of that email has a different type, the component has should be maintained that type, and if both have the same type, that component should maintain the same type, something like a Gmail does when mark as read or not.

Technological environment: MVC, Scrum, Bitbucket, Trello, REST, Angular, Angular CLI, CSS, Git, HTML, JavaScript, npm, PHP, Responsive Web Design, Typescript and Web API.

FRONT END DEVELOPER

GO.K Digital Innovation | Remotely - Brazil | 2017 - 2018

The main goal of this project was to create a growing artificial intelligence, that's able to learn with the user's inputs, and with this, help the users to create marketing campaigns for the correct product-market fit.

I worked on in an MVP with some features, such as login, creation account, recover password, dashboard with charts and list of reports and segments, and a feature to record audio from a user and write down what he said, and after that, create a new campaign based on what he just talked about it.

Technological environment: POC, Scrum, Bitbucket, JIRA, REST, Axure Prototype, Invision Prototype, Angular, Angular CLI, SCSS, Git, HTML, JavaScript, npm, Responsive Web Design, Typescript and Browser API.

FRONT END DEVELOPER

LeadLovers Tecnologia | Curitiba - Brazil | 2014 - 2018

For four years, I worked at this startup (something like eGoi), and at that place, I learned a lot about digital marketing automation and as a front-end developer, I worked with designers and developers, and all issues always involved how to provide the best user experience for the clients. I've gone through all departments in this company: creating page templates, as a scrum master, customizing websites with WordPress, manage affiliates, group administrator on Facebook, creating templates, design team lead, facilitator working on development culture, monitoring user experience with research and team performance with spreadsheets, KPIs and checkpoints with the product team.

In 2014 I worked as a front end and web designer, to make landing pages and websites for the marketing department. In 2015 I continued working as a front-end developer (for the marketing department) and produced some content such as documentation, tutorials, videos for the YouTube channel, and help some users on issues about code. In 2016 I continued working as a front-end developer and help a product team as a team lead, mainly working on user experience with designers and developers.

In 2016 I worked as Team Lead and I received good feedback when the HR made a 360 anonymous research. See [here](#) what my colleagues say about me.

From 2017 until 2019 I worked only as a front-end developer, mainly in a new internal project and two new startups in the company as you can see on [my YouTube channel](#).

Technological environment: MVP, MVC, MVVW, Azure, Scrum, Git GitHub Trello, Asana, REST, SOA, Cloud, Digital Marketing, User Experience, Lean Startup, Scrum, Adobe Photoshop, Angular, Angular Material, AngularJS, API Rest, Bootstrap, Content marketing, CSS 3, Git, GitHub, HTML 5, JavaScript, jQuery, npm, Team Lead, Typescript, WebApi, Webpack and WordPress.

GITHUB PROJECTS

JFORUM ([Repository Link](#))

Just a simple API REST with Spring Boot.

SIMPLE CRUD ([Repository Link](#))

Simple CRUD with Spring Boot, MySQL, Thymeleaf e Bootstrap.

TYPE-NODE ([Repository Link](#))

This API was made with Typescript, follows the TDD approach, and also uses the best design patterns.

PATTERNS ([Repository Link](#))

Practicing the most famous Java Patterns.

JEST ([Repository Link](#))

Show me the code, and I show you the test...

JS-FUNCTIONAL ([Repository Link](#))

Replicate the most famous functional patterns with vanilla JavaScript.

REFACTOR ([Repository Link](#))

The best way to refactor JavaScript applications.

NG9 ([Repository Link](#))

Just a simple test to run angular version 9.

NGRX-BLOG ([Repository Link](#))

Angular reactive with ngRx.

TYPE-NODE-CRUD ([Repository Link](#))

Simple CRUD with NodeJS, TypeScript and MongoDB.

SB-SHOP ([Repository Link](#))

Simple marketplace for order meals with Thymeleaf and MVC pattern.

AWARDS

FEEDBACK 360

On 2016 I worked as Team Lead and I received a good feedback when the HR made a 360 anonymous research. See [here](#) what my colleagues talked about me.

RECOMENDATIONS

KALINE MATTOS (Web Designer at Coolbet)

Ral (as we call him) is an excellent professional, he is always leaving his comfort zone and learning new things. He was a mentor, a friend, a confidant.

An unusual person, always a definite goal. Your projects always come out flawless and optimized. I miss to work with him and exchange experiences.

LUCAS FABOSSI (Designer at LeadLovers)

Israel is one of the most fantastic people I've ever worked with. It is constantly updating itself, sharing knowledge and news. Think of the team and the company honestly and unselfishly. He does not hesitate to test, being always ready to put into practice the ideas and knowledge acquired. An inspiring professional!
